

PUMPS

Each of TECALEMIT's pumps are uniquely designed with the end user in mind. In an industry where details are critical, our engineers envision pump designs that allow users to be more efficient and collect a larger ROI, as a result.

From hand pumps, to 12V pumps, and even 100% continuous duty cycle 110V electrical pumps, TECALEMIT offers it all. Our pumps dispense longer distances, have greater suction lifts, offer higher flow rates, and are built with higher quality than others in the market.

Our collection of pumps can handle small, medium, and large configurations. In addition, they are compatible with a wide range of fluids including Diesel Exhaust Fluid (DEF), diesel, water, antifreeze, chemicals, oils, windshield washer and more.
